**New Foundations in
Mathematics:
The Geometric Concept of
Number**

September 8, 2011

Springer

Contents

1	Modular Number Systems	1
1.1	Beginnings	1
1.2	Modular Numbers	2
1.3	Modular Polynomials	6
1.4	Interpolation Polynomials	10
1.5	Generalized Taylor's Theorem	14
1.5.1	Approximation Theorems:	15
2	Complex and Hyperbolic Numbers	19
2.1	The hyperbolic numbers	19
2.2	Hyperbolic Polar Form	22
2.3	Inner and outer products	26
2.4	Idempotent basis	29
2.5	The cubic equation	31
2.6	Special relativity and Lorentzian geometry	33
3	Geometric Algebra	39
3.1	Introduction	39
3.2	Geometric numbers of the plane	41
3.3	The geometric algebra G_3 of space	46
3.4	Orthogonal transformations	51
3.5	Geometric algebra of \mathbb{R}^n	53
3.6	Vector derivative in \mathbb{R}^n	59
4	Vector Spaces and Matrices	65
4.1	Definitions	65
4.2	Matrix Algebra	67
4.3	Matrix multiplication	71
4.4	Exercises	73
4.5	Rules of matrix algebra	75
4.6	The matrices of G_2 and G_3	76

5	Outer Product and Determinants	81
5.1	The outer product	81
5.2	Applications to matrices	87
6	Systems of Linear Equations	89
6.1	Elementary operations and matrices	89
6.2	Gauss Jordan Elimination	93
6.3	LU decomposition	96
7	Linear Transformations on \mathbb{R}^n	99
7.1	Definition of a linear transformation	99
7.2	The adjoint transformation	103
8	Structure of a Linear Operator	107
8.1	Rank of a linear operator	107
8.2	Characteristic polynomial	109
8.3	Minimal polynomial of f	111
8.4	Spectral decomposition	114
8.5	Jordan normal form	117
9	Linear and Bilinear Forms	125
9.1	The Dual Space	125
9.2	Bilinear Forms	129
9.3	Quadratic Forms	132
9.4	The Normal Form	133
10	Hermitian Inner Product Spaces	139
10.1	Fundamental concepts	139
10.2	Orthogonality relationships in pseudoeuclidean space	142
10.3	Unitary geometric algebra of pseudoeuclidean space	146
10.4	Hermitian orthogonality	151
10.5	Hermitian, Normal, and Unitary Operators	157
10.6	Principal Correlation	160
10.7	Polar and Singular Value Decomposition	163
11	Geometry of moving planes	167
11.1	Relative orthonormal basis	167
11.2	Relative geometric algebras	169
11.3	Moving planes	172
11.4	Splitting the plane	175
12	Representation of the Symmetric Group	181
12.1	The twisted product	181
12.1.1	Special properties	183
12.1.2	Basic relationships	184
12.2	Geometric numbers in $G_{n,n}$	185

12.3	The twisted product of geometric numbers	187
12.4	Symmetric groups in geometric algebras	190
12.4.1	The symmetric group S_4 in $G_{4,4}$	191
12.4.2	The geometric algebra $G = G_{4,4}$	194
12.4.3	The general construction in $G_{n,n}$	197
12.5	The heart of the matter	198
13	Calculus on k-Surfaces	203
13.1	Rectangular patches on a surface	203
13.2	The vector derivative and the directed integral	208
13.3	Classical theorems of integration	214
14	Differential Geometry of Curves	221
14.1	Definition of a curve	221
14.2	Formulas of Frenet-Serret	223
14.3	Special curves	226
14.4	Uniqueness theorem for curves	227
15	Differential Geometry of k-Surfaces	231
15.1	The definition of a k -surface \mathcal{M} in R^n	231
15.2	The shape operator	238
15.3	Geodesic curvature and normal curvature	243
15.4	Gaussian, Mean, and Principal Curvatures of \mathcal{M}	246
15.5	The Curvature Bivector of a k -Surface \mathcal{M}	248
16	Mappings between Surfaces	251
16.1	Mappings between Surfaces	251
16.2	Projectively related surfaces	255
16.3	Conformally related surfaces	257
16.4	Conformal mapping in $R^{p,q}$	262
16.5	Möbius transformations and Vahlen matrices	263
16.6	Affine connections	265
17	Non-Euclidean and Projective Geometries	267
17.1	The affine n -plane \mathcal{A}_h^n	267
17.2	The Meet and Joint Operations	268
17.3	Projective geometry	274
17.4	Conics	281
17.5	Projective geometry is all of geometry	286
17.6	The horosphere $\mathcal{H}^{p,q}$	289
18	Lie groups and Lie algebras	295
18.1	Bivector representation	295
18.2	The general linear group	297
18.3	Projections onto $O_{p,q}, SO_{p,q}, U_{p,q}, SU_{p,q}$	300
18.4	Projection onto SP_{2n}	300

18.5 Semisimple Lie Algebras	301
18.6 The Lie algebras A_n	302
References	307
Index	311
